

## State-owned bulk water authorities

Seqwater is the single supplier of bulk drinking water to the SEQ Water Grid. It stores and treats water from dams, weirs and borefields; as well as water from the Gold Coast Desalination Plant and the Western Corridor Recycled Water Scheme. Seqwater is also responsible for managing the catchments which surround its water sources.

LinkWater is the network controller for the potable bulk water transport network. Water is transported from treatment plants and storage reservoirs through bulk pipelines and into the distribution system. LinkWater monitors and operates the system from its centralised network control centre and also maintains bulk water infrastructure across the region.

The SEQ Water Grid Manager owns the urban water entitlements in South East Queensland and is responsible for managing the SEQ Water Grid. It purchases services to store, treat, produce and transport bulk water from Seqwater and LinkWater. It then sells treated water to council-owned retail distribution businesses and industry customers.

## Council-owned retail authorities

Unitywater is the distribution and retail business for the Sunshine Coast and Morton Bay areas. The council-owned business sells and delivers drinking water to customers and collects, transport and treats wastewater and sewage.

Queensland Urban Utilities is the distribution and retail business for Brisbane, Scenic Rim, Ipswich, Somerset and Lockyer Valley areas. The council-owned business sells and delivers drinking water to customers and collects, transport and treats wastewater and sewage.

Allconnex Water is the distribution and retail business for the Gold Coast, Logan and Redland areas. The council-owned business sells and delivers drinking water to customers and collects, transport and treats wastewater and sewage.
